

### **Re: 2025 Valve Spring Addendum**

**April 1, 2025**

Because of the rising cost and declining quality of the GM 602 valve spring, MidVale Speedway will now permit the PAC replacement spring for competition in the Race-1 sealed 602 crate engines.

Again, Midvale Speedway Race-1 602 engines **will** be permitted to use the PAC replacement spring part # 1210X.

Competitors may still use the GM 19154761 springs as well.

Minimum installed height of 1.700 must be maintained.

ALL related components **MUST** remain factory GM 602.

The two springs listed are the **ONLY** allowable options.

ALL other Race-1 engine programs must stay with 100% GM factory components (unless written rules state otherwise).
