

Crate Innovations

Cii 1003 *PLUS*

This spacer is designed for the GM 602 Dual Plane Intake Manifold

It will meet a 1 inch rule but is NOT legal in all sanctioning bodies.

It can be used in 2 positions----we recommend the center divider wing be placed towards the manifold side, but individual track testing may show benefits with the wing towards the carb side.

- **ALWAYS** check for adequate clearance between throttle plates and spacer
- ALSO check clearance at any linkage areas

Evenly tighten carb and
DO NOT Overtighten
