

Re: Increased Security

September 3, 2026

Race-1 has increased the security and integrity of its seal program in two ways.

1. We have been trained and authorized to use the cup seal identification system for verification of GM bottle cap seals.
2. We have adopted a process used by a highly respected sealing organization and now add a green 'tracker seal' to *every* engine that does not have a complete set of GM seals in place. This highly visible seal will immediately alert an inspector that something has been opened and serviced.
