

### Re: NEW 602 Oil Recommendation      October 4, 2021

#### **This recommendation from Race-1, not GM.**

Race-1 is recommending an oil weight change in all 602s built between April and September of 2021.

Please note this is NOT an across the board 602 recommendation. This ONLY pertains to engines built *in the time frame mentioned above*.

Every engine has a build date tag on the side of the block that should be examined *prior* to making any decision of what oil to run.

For engines falling within this date parameter, Race-1 is recommending an oil weight of 5W/30 or 10W/30.

Again, this recommendation is NOT from GM officials. It is from Race-1.

As always, if you have any questions please contact Race-1.
